

## MobileMD connects your Affiliated Network

**MobileMD™ delivers an advanced healthcare network of value and clinical data repository that improves patient health information access, and system and data interoperability, while driving down costs, streamlining referrals, and improving patient care within your health system.** Within 60 days your health system can go-live on a branded network that supports eReferrals, Orders and delivers, in real-time, clinical results to all providers - those with EMRs and those without an EMR. Moreover, MobileMD supports “meaningful use” and provides a powerful Return on Investment. Find out how health systems are utilizing MobileMD to achieve the benefits of more referrals, higher physician satisfaction ratings and improved quality of patient care by scheduling a 30 minute demonstration.

### MobileMD™ and ARRA HITECH

ARRA HITECH is on the minds of every health system executive in America. The evolving definition of “meaningful use” offers a key that will unlock tomorrow’s technology-enhanced healthcare. MobileMD™ sees **four pillars** supporting the concept of “meaningful use”: **improved patient outcomes, enhanced patient/physician relationships, reduced costs, and measurability of progress.** MobileMD’s HIE successfully addresses the four pillars of “meaningful use” by combining outstanding technology with experienced people to offer a centralized, completely **Managed Service HIE.**

MobileMD’s HIE includes Enterprise Access™ – a comprehensive clinical data repository, standards-based API, and a fully Internet-enabled application for the physician community. MobileMD’s clinical data aggregation and storage capabilities provide unparalleled reporting, analytic, and HIPAA-compliant PHI access and interoperability features.

### Representative Client List

MobileMD works with health systems of all sizes and needs:

Catholic Healthcare West	Texas Health Resources
Centura Health	Boulder Community Hospital
Pinnacle Health	Main Line Health
The Washington Hospital	South Jersey Healthcare

### The Value of a fully managed HIE

MobileMD™ invented the concept of a centralized, fully managed service HIE and to this day provides a greater level of service than any HIE provider in the market.

- **Managed Technology:** MobileMD™ provides all technologies and facilities required for a full-featured HIE. MobileMD’s technology is fully Internet-enabled. No additional hardware or software is required at any participating healthcare entity.
- **Redundant Architecture:** MobileMD™ provides complete technology redundancy at our SAS-70 audited primary location and a hot/real-time SAS-70 audited disaster recovery site.
- **Managed Services:** MobileMD™ provides the people necessary *not only to operate the HIE* but also provide a **one stop shop** for the healthcare community’s service and support needs.
- **More than SaaS:** Unlike our competitors, MobileMD provides all levels of service and support (I - III). MobileMD handles operational issues, workflow issues, and procedural issues as well as technical issues. We act as a **services buffer** between the physician community, health system, and EMR system vendors.
- **Send us the data, we’ll handle the rest:** MobileMD™ doesn’t require support from its clients beyond initial test verification, freeing our clients to focus on care – not technology.
